BEFORE

AFTER

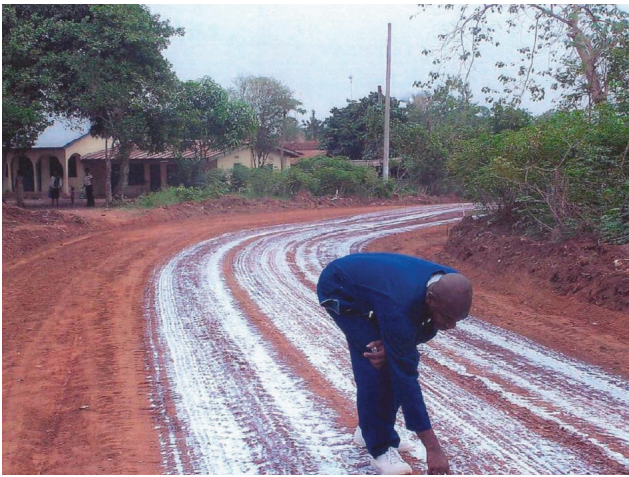

Dirt lot solidified with topical application for the purpose of creating temporary event parking lot

BEFORE

AFTER

Village road before application and after application following a three days of steady rain

Village road modernized through mixed in application

### Construction Site Dust Control

Eliminates need for daily water spraying to prevent air born dust and provides longer term and lower cost compliance with local dust abatement laws

Park paths, recreational area trails and sport facilities  
Stabilize loose top soil to prevent erosion due to wind  
and rain as well as human traffic and sports activities

Stabilize parking lots and storage yards  
for temporary or permanent use

Military Operation Fields, Roads and Aircraft  
Landing Strips and Pads

Hydroseeding is vastly improved with addition of ES JS  
the addition prevents wind, rain and even birds from displacing the seeds.  
Vegetation below the layer is not harmed and it is safe to wild life and your pets.
